APPLICATION AREAS

Product Overview

The OMNI-402-5G is an ultra-wideband antenna, which covers all contemporary 5G/LTE operating frequencies with excellent balanced gain across all frequencies. The antenna operates from 410 to 4200 MHz, with a peak gain of 5.8 dBi across the ultra-wideband. The antenna also offers 2x2 MIMO capability from its vertically separated elements, further enhancing overall performance. The antenna design allows superior pattern control over the entire frequency range, making the OMNI-402 a true high-performance omni-directional MIMO antenna, ideal for the marine and coastal applications.

The OMNI-402 is usable in all parts of the world, guaranteeing signal reception almost everywhere. Poynting achieves this through a new antenna configuration using multiple dipoles and a unique (patented) feed network. The antenna is future-proof as it covers the lower 450 MHz LTE frequency and the upper 4.2 GHz 5G band for coastal and inland applications.

VSWR

Voltage Standing Wave Ratio (VSWR)*

VSWR is a measure of how efficiently radio-frequency power is transmitted from a power source, through a transmission line, into a load. In an ideal system, 100% of the energy is transmitted, corresponding to a VSWR of 1:1.

The OMNI-402-5G delivers superior performance across all bands with a VSWR of 3:1 or better across 90% of the bands.

*VSWR measured with a 2m low loss cable.
