SureCall Fusion2Go Max Class A & Class C Motorhome Cell Signal Booster TS561029 Installation Guide

You can install the SureCall Fusion2Go Max Class A & Class C system yourself, or you can have it installed by an RV dealer or service center. Installation requires running a coax cable into your RV through an available opening or a specially-drilled $\frac{5}{16}$ " (8 mm) entry point. (Speak with a professional if you're not sure how to run cable into your rig.)

There are four main components to install:

Outside antenna with 10' coax cable.

Attach the antenna to the roof of your motorhome with the 3M® adhesive pad. (See the Fusion2Go Max user guide for installation instructions.)

We recommend mounting the outside antenna at the very front or very back of your rig and pointing the inside antenna away from the outside antenna. (This prevents signal oscillation and reduced booster output.)

Insert the connector at the end of the cable into a $\frac{5}{16}$ " (8 mm) hole or other opening and pull the cable into the RV to the booster. Connect the end of the cable to the outside port on the booster.

Do not pinch, kink, loop, or coil the cable.

SureCall Fusion2Go booster

The booster needs to be placed where it has access to a 12-volt DC power socket.

Installation tip:

We strongly recommend that you do a "soft installation" before permanently mounting the outside antenna and pulling cable.

Drive to an area with weak cell signal, then lay out and connect all the components inside your RV. Power up the booster and check the signal you receive from the inside antenna. Compare your internet data speeds with the booster off and the booster on.

v.20220920

Inside coax cable

This system includes a 10-foot length of flexible 195 coax cable.

Do not pinch, kink, loop, or coil the cable.

Use the FME-to-SMA adapter to connect one end of the cable—to the booster's INSIDE port.

Connect the other end to the panel antenna.

Inside Top Signal EDGE directional panel antenna.

This antenna broadcasts in the direction its front face is pointed. It stands upright on any flat surface and can be moved to where you need cell signal most inside your motorhome. You can also mount it to walls or ceilings with the included bracket and hardware or with Command® Strips or similar adhesives.

The closer your cell phone or cellular hotspot, router, or modem is to the antenna, the more signal it will receive. This is particularly important in areas where outside signal is especially weak, when the broadcast area from the panel antenna may be limited to a few feet.
