Package Contents

- Drive Reach Signal Booster & Bracket
- Outside Antenna
- Inside Antenna
- Power Supply
- 13 in. & 18 in. Mast Extensions, Side-Exit Adapter, Spring, 3-Way Mount & Thread Lock Packs
**STEP 1** Select Mounting Location & Assemble the Outside Antenna

Once you have determined the best location for the Outside Antenna, insert cable through **Mast Extension(s)** then through **Side Exit Adapter**.
(STEP 1 cont.)

Use Thread Locker (provided) to thread points and screw into place.

NOTE: Be sure the Outside Antenna is the correct height before applying Thread Locker.

NOTE: When adding the Side Exit Adapter hold the Outside Antenna vertically and screw the adapter from the bottom up. This reduces cable twisting.
STEP 2 Mounting the Outside Antenna

If the vehicle does not have built-in mounting points, a **3-Way Mount** is included that will work on vehicles with mirror rails.

**NOTE:** The cable is strong enough that it may be shut in most vehicle doors without damaging the cable.
(STEP 2 cont.)

If installing with the Spring, disassemble the 3-Way Mount and use disc washer and nut (provided) to mount the Outside Antenna with Spring as shown.

- Remove nut & shakeproof washer
- Remove bolt, lock washer & plastic washer
- Mount disc washer with lip in the DOWN position
- Fasten nut with lip in the UP position
STEP 3 Mounting the Inside Antenna

Identify a place to mount the **Inside Antenna**, either on the side of the seat or on the dash and mount. The location should be at least 18 inches but no more than 36 inches from where the cellular device will be used. Use the Velcro® adhesive strip/adhesive strip provided and attach to desired location.
STEP 4 Connect Coax Cables to Booster

Connect the cable from the **Outside Antenna** to the port labeled “Outside Antenna” on the booster and connect the cable from the **Inside Antenna** to the port labeled “Inside Antenna” on the booster.
STEP 5 Connect Power Supply to Booster

Connect the 12V Power Supply Cord to the end of the Booster, labeled "12V DC" then plug the power adapter into vehicle’s 12V DC Power Supply. Push switch to ON position. If your Drive Reach is working correctly, the light on the Booster will be green. Use only the Power Supply provided in this package.

NOTE: If the 12V Cigarette Lighter port on your car is always on (even when your vehicle is turned off) and you will be parking for extended periods of time (more than a day), we recommend you turn the Booster off by pushing power cord switch to OFF position. This will prevent the Drive Reach from draining the battery in your vehicle.
Booster Light Patterns

SOLID GREEN
This indicates that your Drive Reach Booster is functioning properly and there are no issues with installation.

SOLID RED
Band has shutoff. This is due to a feedback loop condition called oscillation. This is a built-in safety feature that causes a band to shut off to prevent harmful interference with a nearby cell tower. Refer to Troubleshooting section.

BLINKING RED, THEN SOLID GREEN
This indicates that one or more of the Booster bands has reduced power due to a minor feedback loop condition called oscillation. This is a built-in safety feature to prevent harmful interference with a nearby cell tower. If you are already experiencing the desired signal boost, then no further adjustments are necessary. If you are not experiencing the desired boost in coverage then refer to the Troubleshooting section.

Light Off
If the Drive Reach Signal Booster’s light is off, verify your power supply has power.
(Booster Light Patterns cont.)

NOTE: The Signal Booster can be reset by disconnecting and reconnecting the power supply.

After troubleshooting you must initiate a new power cycle by disconnecting and then reconnecting power to the Booster.
Troubleshooting

FIXING BLINKING OR RED LIGHT ISSUES

This section is only applicable if the Booster is red or blinking red and you are not experiencing the desired signal boost.

1. Unplug the Booster’s power supply.

2. Relocate the inside and Outside Antenna further from each other. The objective is to increase the separation distance between them, so that they will not create this feedback condition discussed before.

3. Plug Power Supply back in and ensure switch is in ON position.

4. Monitor the indicator light on your Booster. If, after a few seconds of ‘power on’, a solid or blinking red light appears, repeat steps 1 through 3. Increase the separation distance until the condition is corrected and/or desired coverage area is achieved. Note: Horizontal separation of the two antennas typically requires a shorter separation distance than vertical separation.

If you are having any difficulties while testing or installing your Booster, contact our weBoost Customer Support team for assistance (866.294.1660).
FREQUENTLY ASKED QUESTIONS

How can I contact customer support?
Customer Support can be reached Monday through Friday by calling 866.294.1660, or through our support site at support.weboost.com.

Why do I need to create distance between the Outside Antenna and Inside Antenna?
Antennas connected to a booster create spheres of signal. When these spheres overlap, a condition called oscillation occurs. Oscillation can be thought of as noise, which causes the booster to scale down its power or shut down to prevent damage. The best way to keep these spheres of signal from overlapping is to maximize separation between the inside and outside antennas.
Safety Guidelines

Use only the power supply provided in this package. Use of a non-weBoost product may damage your equipment.

Connecting this signal booster directly to the cell phone with use of an adapter will damage the cell phone.

RF Safety Warning: Any antenna used with this device must be located at least 8 inches from all persons.

AWS Warning: The Outside Antenna must be installed no higher than 10 meters (31’9”) above ground.

---

This is a CONSUMER device.

**BEFORE USE,** you **MUST REGISTER THIS DEVICE** with your wireless provider and have your provider’s consent. Most wireless providers consent to the use of signal boosters. Some providers may not consent to the use of this device on their network. If you are unsure, contact your provider.

You **MUST** operate this device with approved antennas and cables as specified by the manufacturer. Antennas **MUST** be installed at least 20 cm (8 inches) from any person.

You **MUST** cease operating this device immediately if requested by the FCC or licensed wireless service provider.

**WARNING.** E911 location information may not be provided or may be inaccurate for calls served by using this device.
(Safety Guidelines cont.)

Antenna Info

The following accessories are certified by the FCC to be used with the Drive Reach Booster.

This radio transmitter 4726A-460061 has been approved by innovation, Science and Economic Development Canada to operate with the antenna types listed below, with the maximum gain indicated. Antenna types not included in this list that have a gain greater than the maximum gain indicated for any type listed are strictly prohibited for use with this device.

Each Signal Booster is individually tested and factory set to ensure FCC compliance. The Signal Booster cannot be adjusted without factory reprogramming or disabling the hardware. The Signal Booster will amplify, but not alter incoming and outgoing signals in order to increase coverage of authorized frequency bands only. If the Signal Booster is not in use for five minutes, it will reduce gain until a signal is detected. If a detected signal is too high in a frequency band, or if the Signal Booster detects an oscillation, the Signal Booster will automatically turn the power off on that band. For a detected oscillation the Signal Booster will automatically resume normal operation after a minimum of 1 minute. After 5 (five) such automatic restarts, any problematic bands are permanently shut off until the Signal Booster has been manually restarted by momentarily removing power from the Signal Booster. Noise power, gain, and linearity are maintained by the Signal Booster’s microprocessor.

This device complies with Part 15 of FCC rules. Operation is subject to two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. Changes or modifications not expressly approved by weBoost could void the authority to operate this equipment.
☐ 2 YEAR WARRANTY

weBoost Signal Boosters are warranted for two (2) years against defects in workmanship and/or materials. Warranty cases may be resolved by returning the product directly to the reseller with a dated proof of purchase.

Signal Boosters may also be returned directly to the manufacturer at the consumer’s expense, with a dated proof of purchase and a Returned Material Authorization (RMA) number supplied by weBoost. weBoost shall, at its option, either repair or replace the product.

This warranty does not apply to any Signal Boosters determined by weBoost to have been subjected to misuse, abuse, neglect, or mishandling that alters or damages physical or electronic properties.

Replacement products may include refurbished weBoost products that have been recertified to conform with product specifications.

RMA numbers may be obtained by contacting Customer Support.

DISCLAIMER: The information provided by weBoost is believed to be complete and accurate. However, no responsibility is assumed by weBoost for any business or personal losses arising from its use, or for any infringements of patents or other rights of third parties that may result from its use.
