About

The WilsonPro Pro Signal Meter from Wilson Electronics features an integrated rechargeable battery allows for maximum portability while the large LCD display and push button operation takes the hassle out of site surveys.

The Pro Signal Meter greatly simplifies signal amplifier installation by providing accurate downlink signal readings. Prior to installation, outside signal readings can be made for each cellular band and channel, so that donor (outside) antenna placement can be optimized. Indoors, areas of weak cell signal can be identified so that amplifiers and server (indoor) antennas are placed in the areas where they are most needed. Finally, the Pro Signal meter can be used to validate the final system performance at project close-out.
